Zoe Fannon supports clients in networked utilities sectors—including electricity, heat, and water—on the regulation of pricing and market activity, with particular expertise in data analysis and econometrics. She conducts econometric analyses to benchmark costs in the electricity transmission and aviation sectors, provide estimates of customer willingness to pay for improvements in water and sewerage services, and examine the potential for industrial self-supply in response to transmission tariff changes.

Dr. Fannon has advised clients across the electricity value chain and in the heat, water, and transport sectors. She has worked in jurisdictions including the UK, North America, continental Europe, and the Middle East. Her experience includes analysis supporting price control submissions, work on market pricing for energy storage assets, cost benchmarking, tariff design, willingness-to-pay studies of customer preferences, and regulatory due diligence.

Prior to joining NERA, Dr. Fannon completed her doctoral thesis on identification in econometric models for repeated cross-section and panel data at the University of Oxford.

Education

PhD in economics, University of Oxford

MPhil in economics, University of Oxford

BA in philosophy, politics, and economics, University of Oxford

Practice Areas

Energy

Transport

Water

About NERA

NERA Economic Consulting (www.nera.com) is a global firm of experts dedicated to applying economic, finance, and quantitative principles to complex business and legal challenges. For over half a century, NERA's economists have been creating strategies, studies, reports, expert testimony, and policy recommendations for government authorities and the world's leading law firms and corporations. With its main office in New York City, NERA serves clients from more than 25 offices across North America, Europe, and Asia Pacific.
